                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                              * NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html)

* NOTE: This is a 'working draft' sequence. It currently

* consists of 9 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (23-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Nov 23, 2002 this sequence version replaced gi:23269911. The sequence in this assembly is a combination of BAC based reads
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (20-MAR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 256285)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On May 13, 2003 this sequence version replaced gi:23264293. The sequence in this assembly is a combination of BAC based reads
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Direct Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               * NOTE: Estimated insert size may differ from sequence length

Generation and initial analysis of more than 15,000 full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Clone distribution: MGC clone distribution information can be for through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 158 Row: d Column: 10
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Steve Jones, Sarah Barber, Mabel Brown-John, Yaron Butterfield, Andy Chan, Steve S.                                                                                                                                                                                 The invention relates to an anti-apoptopic gene SSC-S2 and encoded protein. The gene is a positive mediator of tumour growth and metastasis in certain cancer types. The SSC-S2 protein can be expressed by standard recombinant methodology. The SSC-S2 polypeptide is useful as a target for identifying compounds that modulate cancer progression by inhibiting apoptosis, as a target for detecting cancers where this polypeptide is overexpressed, e.g. renal and overian cancers, and leukemia. The antibody and antisense oligonucleotide can be used to treat cancer and to inhibit cancer cell proliferation and/or metastasis. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New SCC-S2 polypeptides and nucleic acids encoding them, useful autarget for identifying compounds that modulate cancer progression inhibiting apoptosis, as a target for detecting cancers, or for

The invention relates to a novel method for identifying a compound that CC modulates T lymphocyte activation. The method comprises contacting a T CC cell comprising an A-raf-1 or TCPTP/PTPN2 polypeptide with a compound, CC where the A-raf- 1 or TCPTP/PTPN2 polypeptide is encoded by a nucleic acid that hybridises to a nucleic acid encoding a polypeptide having a CC sequence selected from two 606-amino acid sequence and a 415-amino acid sequence given in the specification. The method of the invention has CC immunosuppressive, antiasthmatic, antiallergic, and antiinflammatory CC activity. The method is useful for identifying compounds that modulate CC lymphocyte activation and migration, and for monitoring changes in cell Surface marker expression, cytokine production, antibody production, CC proliferation and differentiation, and apoptosis, using either cell lines CC corp rimary cells. The A-raf- 1 or TCPTP/PTPN2 proteins may be used as CC drug targets for compounds that suppress or activate lymphocyte activation and migration, e.g. for the treatment of diseases in which CC modulation of the immune response is desired such as delayed type and acute and chronic inflammation. Modulators of lymphocyte activation and care useful for treating disorders related T and B cell activation and CC invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

AAX97916 to AAX98029 represent 110 isolated human secreted protein genes. AAY36224 to AAX36727 represent the secreted proteins encoded by the 110 human genes. The genes and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 110 genes, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or

                                                                                                               밁
                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                       The invention relates to an isolated HKABT24 nucleic acid molecule. The polypeptides, nucleic acids and antibodies are useful for diagnosing a complete pathological condition or a susceptibility to a pathological condition, for pathological condition, and the rimmune disorders, neurological and blood clotting disorders. The nucleic acids are also useful for chromosome clotting disorders. The nucleic acids are also useful for chromosome clotting in the polypeptides and antibodies are useful for providing immunological probes for differential identification of the tissues communological probes for differential identification of the tissues community of the sada as a food additive or preservative to contract of the protein. Note: The sequence represents convention of the printed specification but was obtained in electronic format directly from USPTO at the protein contract.
                                                                                                                                                                        Query Match

neurodegenerative disorders

21; SEQ ID NO 430; 1754pp; English.

CC neurodegenerative disorders, or polypeptides comprising an amino acid compenses at least 95% identical to the new sequences. The polypeptides, antibodies or antibodies or antibody fragments that bind to the polypeptides, nucleic carids encoding the polypeptides, agonists or antagonists that binds to the polypeptide, are useful in preparing diagnostic or pharmaceutical compositions for diagnosing, treating or preventing an e.g. immune compositions for crohn's disease), respiratory disorders (e.g. asthma and callergy), cancers (e.g. gastric, ovarian or lung cancer), CNS disorders (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative (e.g. atherosclerosis or myocarditis). The controlling gene expression through triple helix formation or antisense DNA or RNA, in gene therapy, for identification, chromosome comminute biological samples, in forensic biology, and as hybridization or antisense DNA or RNA, in gene therapy, for identifying individuals comminute biological samples, in forensic biology, and as hybridization controlling neural disorders (e.g. els, to raise antibodies, for testing biological activities, and for treating or preventing neural disorders, immune system disorders, creating or preventing neural disorders, immune system disorders, and for the sequence data for this patent did form part of the printed specification, but was obtained in electronic format directly from WIPO at The invention relates to 592 new human secreted polypeptides useful fo diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or ftp.wipo.int/pub/published_pct_sequences

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length CDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03165 to AAH13628 and callsonucleotides, all of which are used in the exemplification of the oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Primer sets for synthesizing polynucleotides, particularly the 5602 full-
length cDNAs defined in the specification, and for the detection and/or
diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1729 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2001-318749/34.

This invention relates to the novel association of protein sequences the genes which encode them) to the NF-kappaB pathway. The invention be useful for the production of compounds with an antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antirheumatic, gastrointestinal-Gen, antiasthmatic, antiarteriosclerotic, immunomodulator, cerebroprotective, vasotropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides useful for diagnosing, preventing, treating, or ameliorating conditio

conditions

immune disorder, an inflammatory disorder, an inflammatory disorder related to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, thepatic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM syndromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic ectodermal dysplasia, X-linked anhidrotic ectodermal dysplasia, X-linked anhidrotic ectodermal dysplasia, with infections, HIV-1, HTLV-1, hepatitis B, hepatitis C, EBV, influenza, viral infections, hiv-1, HTLV-1, hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell survival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper immune activity, disorders related to aberrant acute phase responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, conditions related to organ transplant correction, disorders related to aberrant signal transduction, proliferating disorders, cancers and HIV propagation in cells infected with other viruses. The present sequence is that of a human gene which is subject to the novel association with the NF-kappaB pathway of the invention. Note: This sequence does not appear in the specification but was obtained by the indexer from Genbank.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.

Claim 1; SEQ ID NO 217; 237pp; English.

CC vulnerary activity or for gene therapy. The proteins and nucleotides are cuseful for diagnosing, preventing, treating, or ameliorating conditions conditions diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder an inflammatory disorder related to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, concertaint disorders, Hodgkin's lymphomas, haematopoletic tumours, hyper-IgM comparities by hypohidrotic ectodermal dysplasia, X-linked anhidrotic concorderations, himmunodeficiency, viral infections, HTV-1, HTV-1, hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell convival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper congenital conditions, birth defects, necrocic lesions, wounds, corgan transplant rejection, conditions related to organ transplant corporation, disorders related to aberrant signal transduction, disorders related to aberrant signal transduction, disorders related to aberrant signal transduction, for the present sequence is that of a human gene which is subject to the novel association with the NF-kappaB pathway of the subject to the novel association with the NF-kappaB pathway invention. Note: This sequence does not appear in the specified was obtained by the indexer from Genbank. be useful for the production of compounds with an antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antirheumatic, gastrointestinal-den, antiasthmatic, antiarteriosclerotic, immunosmodulator, cerebroprotective, vasotropic, immunosuppressive o This invention relates to the novel association of protein sequences the genes which encode them) to the NF-kappaB pathway. The invention

Recombinant nucleic acid useful for diagnosis and treatment comprises a nucleotide sequence.
                                                                                          2003-328604/31
                                                                                  엵
                                                                                  carcinoma
```

SEQ ID

NO 497; Opp; English.

The present invention relates to novel DNA and protein sequences which CC are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (iv) for carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a biochip; (c) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma or a propensity to carcinoma; and (xi) for considerated (CA) gene copy number. In addition, the CAP genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA gene sequence. Note: This patent is an equivalent to basic patent useful as markers of useful as markers of the copy number.

CC This invention relates to the novel association of protein sequences (and CC the genes which encode them) to the NF-kappaB pathway. The invention may CC be useful for the production of compounds with an antiinflammatory, CC cytostatic, hepatotropic, virucide, antiarthritic, antiinfumatic, CC gastrointestinal-Gen, antiasthmatic, antiarteriosclerotic.

CC immunomodulator, cerebroprotective, vasotropic, immunosuppressive or cytostatid for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder, an inflammatory disorder crelated to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, CC hepatic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM syndromes, hypehidrotic ectodermal dysplasia, X-linked anhidrotic cetodermal dysplasia, immunodeficiency, viral infections, HVV-1, HTLV-1, CC hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell survival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper congenital conditions, birth defects, necrocic lesions, wounds, crejection, disorders related to aberrant acute phase responses, cuthfor disorders related to aberrant signal transduction, fielded control of the virees free and HIV propagation in cells infected with other virees free and HIV propagation in cells infected with the process and HIV propagation in cells infected with the process and HIV propagation in cells infected with the process and HIV propagation in cells infected with the process and HIV propagation in cells infected with the process and HIV propagation in cells infected with the process and HIV propagation in cells infected with the process and HIV propagation in cells infected with the process and HIV propagation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               immunosuppressive; vulnerary; gene therapy; immune disorder; inflammatory disorder; NP-kappaB regulation; cancer; aberrant apoptosis; hepatic disorder; Hodgkin's lymphoma; haematopoietic tumour; hyper-IgM syndrome; hypehidrotic ectodermal dysplasia; Y-linked anhidrotic ectodermal dysplasia; immunodeficiency; viral infection; HIV-1; HTLV-1; hepatitis B; hepatitis C; EBU; influenza; viral replication; host cell survival; evasion of immune response; rheumatoid arthritis; inflammatory bowel disease; colitis; asthma; atherosclerosis; cachexia; euthyroid sick syndrome; stroke; EAE; autoimmune disorder; hyper immune activity; aberrant acute phase response; hypercongenital condition; birth defect; necrotic lesion; wound; organ transplant rejection; aberrant signal transduction; proliferating disorder; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NF-kappaB pathway; antiinflammatory; cytostatic; hepatotropic; virucide; antiarthritic; antirheumatic; gastrointestinal-Gen; antiasthmatic; antiarteriosclerotic; immunomodulator; cerebroprotective; vasotropic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bloactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for a carcinoma; (vi) for inhibiting the activity of CAP; (v) for diagnosing carcinoma; (vi) for neutralizing the activity of CAP; (vi) for treating carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a blochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586AI, for which no sequence data was published

CC length cDNAs defined in the specification. Where a primer set comprises:

(C (a) an oligo-dT primer and an oligonucleotide which comprises one of the 5602 complementary strand of a polynucleotide which comprises one of the 5602 cc complementary strand of a polynucleotide which comprises one of the 5602 cc oligonucleotide comprises at least 15 nucleotides; or (b) a combination co of an oligonucleotide comprising a sequence complementary to the cc complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the cc oligonucleotide which comprises and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in c specification. The primer sets can be used in antisense therapy and in c sparticularly full-length cDNAs. The primers are also useful for the particularly full-length cDNAs. The primers are also useful for the combination of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and constraint of the combination of the comprises allow obtaining of the AAH3628 and constraint invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Primer sets for synthesizing polynucleotides, particularly the 5602 ful length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         02-MAY-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                       The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (iv) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating (carcinoma; (viii) for neutralizing the effect of CAP; (vii) for the capable of carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a biochip; (vx) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining carcinoma or a propensity to carcinoma; and (xi) for carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent (vx) US2002182586A1, for which no sequence data was published
                                                                                                                     Query Match

The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
                                                                                                                                  Recombinant nucleic acid useful for diagnosis comprises a nucleotide sequence.

In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA gene sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published

                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes primer sets for synthesising 5602 full-
clength cDNAs defined in the specification. Where a primer set comprises:
cc (a) an oligo-dT primer and noligonucleotide complementary to the
cc complementary strand of a polynucleotide which comprises one of the 5602
cn uncleotide sequences defined in the specification, where the
cc oligonucleotide comprises at least 15 nucleotides; or (b) a combination
cc of an oligonucleotide comprising a sequence complementary to the
cc complementary strand of a polynucleotide which comprises a 5'-end
cc sequence and an oligonucleotide comprising a sequence complementary to a
cc polynucleotide which comprises a 1'-end sequence, where the
cc polynucleotide which comprises a 1'-end sequence of the 5'-end sequence/3'-end sequence is selected from those defined in the
cc plication. The primer sets can be used in antisense therapy and in
cc particularly full-length cDNAs. The primers are also useful for the
cc gene therapy. The primers have been antisense therapy and in
cc particularly without any specialised methods. AAH03166 to AAH13628 and
cc cDNAs easily without any specialised methods. AAH03166 to AAH13632 represent
cc paresent human amino acid sequences; and AAH13629 to AAH13632 represent

                                                                                                                                                                                                                                                                              The invention relates to 2495 novel polynucleotides (I) and their encoded polypeptides, sequences hybridizing to these nucleotides, sequences encoding partial polypeptides and sequences having 70% or 90% identity to the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases,
